Why Recycle?

Save the Environment

Fluorescent lamps contain mercury, and ballasts, batteries, and electronic waste can contain mercury, lead, metals, and other materials which have a harmful effect on the environment if not recycled.

Legal Requirements

Federal and state EPA regulations require that lamps be recycled. Penalties for failing to recycle can result in large fines and negative PR.

Recycling is Cost Effective

The cost to recycle a fluorescent lamp is less than 1% of the cost of ownership. Implementing a lamp, ballast, battery, or electronics recycling program and obtaining a certificate of recycling is also a proactive method to avoid fines and costly enforcement action.

The Bulb Eater® 3 On-Site Lamp Crusher

Featuring Bulb Eater® 3/3L with Intelli Technology - Single model capable of crushing linear lamps of any length, CFL's, & U-Tubes Safe, Fast, and Efficient Lamp Disposal

Savings – Pre-crushing lamps can cut recycling costs by 50%

Storage – Hold up to 1350 4' lamps in single 55 gallon drum

Safety – OSHA & ACGIH Compliant

Speed – Crush a 4' lamp in less than 1 second

EasyPak Pre-Paid Recycling Containers

Fast, Convenient Recycling by Mail

Convenient – Recycling reports and certificates available online

Storage – Save space. When it's full, ship it, it's pre-paid

Sustainable – Automatically receive replacement containers

Comprehensive – Return shipping and recycling fees included
